

# LOAD BALANCING SOLUTION

## Maximizing Hardware Resources

Ehopii is a scalable load balancing application for streaming digital content. Built to handle any amount of stream load and maximizing your hardware resources.

## Save Money with Ehopii

One single price - just add servers!  
Imagine a clustered streaming network that is built to serve from 10,000 to over 100,000 simultaneous streams.

## Master Server and Leafs

Ehopii enables broadcasters to stream digital content to massive amounts of viewing receivers at the same time. Includes a Master server and more Leaf's (secondary servers).

## Designed for any size audiences

Ehopii automatically redirects load from the Master server to the Leaf servers (e-hops) as traffic loads increase. Everything is monitored by Ehopii and automatically balanced through Ehopii.

## Easily Scales as you grow

Start with one Master server and add Ehopii Leaf servers as you grow. Deployment of additional Leafs may be added to your network as more traffic comes online.

## High Demand Streaming - OK!

Ehopii guarantees that your streaming network honors real time requests for your digital assets. Ehopii has real-time reports used to forecast your future equipment needs.
